THE NEW, THINNER PROFILE FORMICA® LIFESEAL® WORKTOPS.

BECAUSE LESS IS MORE.

Kristall®
Finish: Gloss

THIS GLOBAL TREND IS COMING HOME.

Modern kitchen aesthetics are shifting away from heavy, chunky surfaces toward thinner, more minimalist designs. Reflecting this international slimline trend, the standard thickness of our Formica® LifeSeal® Worktops has been condensed down from 32mm to a more contemporary and elegant 22mm across the entire range.

BETTER TO LOOK AT. BETTER TO WORK WITH.

The slim SupaWood® substrate offers a smoother surface for finishing whilst the higher density improves performance characteristics and durability. This slimmer profile pairs perfectly with handleless cabinetry and open-plan living.

Finish: Gloss

CRAFTED TO LAST.

Our Formica® LifeSeal® Worktops are made with a moisture-resistant decorative surface bonded to a durable, slim SupaWood® core. Proper sealing on all the edges of the worktop (including those up against the wall, butt joints and any cut-outs for sinks and stove-tops) will protect the core from moisture, so your top will not swell and should last for years to come.
